PCI-M512

PCI-M4M

Features

- On-board 512K bytes SRAM for PCI-M512
- On-board 4M bytes SRAM for PCI-M4M
- Two Li-batteries, BT1 & BT2, for battery-backup the data of SRAM
- Two indicators, low-battery & bad-battery, for battery BT1
- Another two indicators, low-battery & bad-battery, for battery BT2
- 16-bit general purpose TTL-compatible D/O or relay (with daughter board DB-16R or DB-24PR)
- 12-bit general propose TTL-compatible D/I or isolated input (with daughter board DB-16P)

Functional Description

The PCI-M512 provides 512K bytes memory and the PCI-M4M provides 4M bytes memory. They consist of one 12-bit input port and one 16-bit output port. The user can use the DB-16P to connect the input ports (CN2) for isolation purpose, or use DB-16R to interface to the output ports (CN1) for relay control.

Specifications

Digital Input

- Number of channels: 12
- All inputs are TTL compatible
- Logic high voltage: 2.4V min
- Logic low voltage: 0.8V max

Digital Output

- Number of channels: 16
- All outputs are TTL compatible
- Sink current: 24 mA max
- Source current: 15 mA max

PCI-180X/1602/1202

12/16-bit high performance multi-function DAQ boards

PCI-1800H

Functional Description

The PCI-180X series is a family of high performance data acquisition board for PC with PCI bus. It features a continuous, 330KHz, gap-free data acquisition under DOS and Windows. This family has the same architecture: one 12-bit 330KHz A/D converter, two 12-bit independent D/A converters, 16-channel digital input and 16-channel digital output. The PCI-1800H/L provides 16-channel single-ended or 8-channel differential analog input. The PCI-1802H/L provides 32 channel single-ended or 16-channel differential analog input. The -H means high gain mode and the -L means low gain mode. Two DACs of the multifunction card are independent bipolar voltage output with jumper selectable voltage output range.

The scan function of PCI-180X is so amazing. We call it "MAGIC SCAN". It scans with two modes: "Fix channel scan" and "Variable channel scan". The "Magic scan" mechanism not only scan the different input channels at vastly different rates, but also at different gain. Even in multi-channel scan, both modes can be up to 330K samples per second.

The PCI-180X series also has other outstanding features. For example:

1. The data transfer rate of digital I/O is up to 2.1 M words/second (non-burst mode).
2. The throughput of D/A is up to 2.1MHz throughput max.
3. Provides three flexible external trigger modes, such as post-trigger, pre-trigger, middle trigger.
4. Provides M-function and Continue Capture function.

The PCI-1202H/L is very similar to PCI-1802H/L. The different items between the PCI-1802 and PCI-1202 are given as follows:

- A/D sampling rate is 110K samples/second for PCI-1202.
- FIFOs size is 1K samples for PCI-1202.

The PCI-1602 is very similar to PCI-1802L. The

Features

- 32-bit +5V PCI Bus, Plug & Play
- 12/16-bit resolution
- Up to 330KS/s sampling rate
- Single-ended or differential analog input
- On-board FIFOs
- Software programmable gain
- Two 12-bit independent programmable DAC
- 16 digital input / 16 digital output channels

different items between the PCI-1802 and PCI-1602 are given as follows:

- 16-bit A/D converter
- A/D sampling rate is 200K sample/second for PCI-1602F.
- A/D sampling rate is 100K sample/second for PCI-1602.

Applications

- High speed data acquisition system
- Process monitor and control
- Vibration analysis
- Digital pattern generator from digital I/O port
- Continue data capture

"MAGIC SCAN " Function

The "MAGIC SCAN "controller is a innovative design. It has the following features:

1. Different gain for each scan channel
2. Non-sequential order for channel scan
3. Different sampling rate for each scan channel
4. Programmable different digital filter for each scan channel
5. Programmable high/ low alarm function, provide four different alarm monitor mode for each scan channel
6. The scan sampling rate can maintain at max. sampling rates without sacrifice the speed
7. Provide three external trigger: Pre-trigger, Post-rigger, Middle-trigger
8. Easy programming

The PCI-1800 can measure the high frequency signal and low frequency signal with different sampling rate. In other words, the user doesn't have to waste valuable data memory for low speed channel. It can measure small signal and large signal at the same time. The digital filter can filter out some noisy signal. The programmable high/ low alarm function will be very helpful for some monitor application system.

The Format of Function Call

Alarm type

M_Function

M_Function is used to support simultaneous gap-free A/D, D/A at full-rated throughput. The user can use the D/A channel to send out the pre-defined signal pattern to the external device and measure the output signal simultaneously. The M_Function can be executed under DOS, Windows and Linux. Some programming language (VC/C++, BC++, VB, Delphi), Java and package (LabVIEW) can call the M_Function.

Continue Capture Function

The PCI-180X/1602/1202 provide different continuously capture functions.

1. Continuous Capture at Low speed. The acquired data can be display at the monitor simultaneously. No storage is required. Therefore the user can monitor the data continually.
2. Continuous Capture at high speed. The acquired data should be saved into the DRAM of PC. The capture period should be limited to the Memory size.
3. Continuous Capture at high speed. The acquired data should be saved into the SRAM card of PC. The capture period should be limited to the Memory size. The user should have to calculate the memory size according to the sampling rate and the capture period.

The Continue Capture function can be executed under DOS, Windows and Linux. Continuous Capture function can support multiple boards.

FIFO Size

How many FIFOs is large enough for your application? It depends on your application. You can calculate the time buffer using the following formula. For example, the FIFO size of PCI-1800 is 1K samples. The maximum. Sampling rate of the board is 330KS/s . The time buffer you can get is 1K Samples (FIFO Size) / 330K Samples/s = 3.03ms. It is enough for regular application under the DOS. For some complicated multi-tasking applications, the user have to know the FIFO size he needs; otherwise the data might be lost. The PCI-1800 series provide the possibility to upgrade the FIFO size.

Diverse Trigger Mode

PCI-180X series provide diverse internal and external trigger modes. The internal trigger includes software trigger and pacer timer trigger. The external trigger includes the following trigger modes.

- **Post-trigger mode:** Acquisition begins after an external trigger and continues until the specified number of samples are collected.
- **Pre-trigger mode:** Acquisition occurs before an external trigger occurs.
- **Middle-trigger mode:** Acquisition occurs before and after an external trigger occurs. The samples number can be pre-defined.

Features

- 32-bit +5V PCI bus, Plug & Play
- 12-bit resolution
- 32 single-ended or 16 differential analog inputs
- The sampling rate of single channel or multiple channels is 110 K samples/s
- Programmable gain: 1, 2, 4, 8 (PCI-1002L)

- Internal / external trigger
- Three different external trigger: post-trigger, pre-trigger, middle-trigger
- 16 digital input / 16 digital output channels

Functional Description

The PCI-1002 series is a family of A/D board for PC with PCI bus. It features a 110KHz data acquisition under DOS and Windows. The PCI-1002H/L provides 32-channel single-ended or 16-channel differential analog input, 16-channel digital input and 16-channel digital output. The -H means high gain mode and the -L means low gain mode. The PCI-1002 series provides three flexible external trigger mode: post-trigger, pre-trigger, middle-trigger.

PCI Multi-Function Board

PIO-821

16-channel 12-bit 45KS/s low cost multi-function board

Features

- 32-bit +5V PCI Bus, Plug & Play
- 12-bit resolution
- The maximum sample rate is 45K samples/second
- 16 single-ended or 8 differential analog inputs
- A/D trigger mode: software trigger, pacer trigger
- Programmable high gain: 1, 10, 100, 1000 (PIO-821PGH)
- Programmable low gain: 1, 2, 4, 8 (PIO-821PGL)
- 1-channel 12-bit D/A voltage output
- 16 digital input / 16 digital output channels
- Software calibrated

Functional Description

The PIO-821 is a low cost multi-function card for PC with PCI bus. The PIO-821 contains 16-channel single-ended or 8-channel differential analog input, 1-channel 12-bit DAC voltage output, 16-channel digital input and 16-channel digital output. The maximum sampling rate of A/D converter is about 45K sample/second.

Applications

- Process monitor and control
- Vibration Analysis
- Digital pattern generator from digital I/O port

Specifications

Analog Input

- Number of channels: 16 signal-ended or 8 differential
- Resolution: 12-bit
- Conversion time: 8 microseconds
- Input current: 250 nA max (125 nA typical) at 25°C
- On chip sample & hold
- Overvoltage protection: $\pm 35V$
- Input impedance: $10^{10} \Omega$
- Accuracy: 0.01% of reading ± 1 bit
- Linearity: ± 1 bit

Unipolar: $0 \sim 10V$, $0 \sim 5V$, $0 \sim 2.5V$, $0 \sim 1.25V$, $0 \sim 0.625V$
- Programmable gain control: 1, 2, 4, 8, 16
- 3000V isolated voltage for built-in DC/DC converter
- A/D trigger mode: software trigger
- A/D data transfer mode: polling

Functional Description

The PISO-813 is a bus-type isolated 12-bit A/D board fwith the PCI bus for IBM or compatible PC. It features a 10KHz data acquisition under DOS and Windows. The PISO-813 provides 32-channel single-ended analog input. The isolation range of PISO-813 can reach to 3000VDC. It is the most cost-effective isolated A/D board for the PCI Bus in the world.

Features

- 32-bit +5V PCI Bus, Plug & Play
- Two independent 12-bit channels of analog output
- 3750 VDC isolation protection
- 3000 VDC isolation DC/DC converter build-in
- Software calibration
- The calibration data is fully stored in EEPROM
- Two pacer timers interrupt source
- The voltage or current output can be set to arbitrary values or reset to zero when the power is on

Functional Description

The PISO-DA2 is a PCI bus analog output board with two isolated 12-bit output channels for IBM personal computer and compatibility. The output range can be configured as voltage output by one of the different ranges: $\pm 10V$, $\pm 5V$, $0\sim 10V$, $0\sim 5V$, or current output using loop sink by the range: $0\sim 20\text{ mA}$ or $4\sim 20\text{ mA}$. Besides, output channel is isolated from each other and the isolation range can reach the voltage more than 3000 VDC. The maximum conversion rate of the analog output is 10KS/s. It is the most cost-effective isolated D/A board for the PCI bus interface.

PCI Analog Output Board

PIO-DA16/DA8/DA4 Series

16/8/4-channel 14-bit analog output board

Features

- 32-bit +5V PCI bus, Plug & Play
- 16/8/4-channel, 14-bit analog output
- Unipolar or bipolar outputs available from each converter
- Voltage/current outputs for individual D/A converter
- Output type and output range can be software programmable
- 4~20 mA or 0~20 mA current sink to ground for each converter
- Two pacer timers interrupt source
- Double-buffered D/A latches
- Software calibration
- 16-channel DI, 16-channel DO

Functional Description

The PIO-DA16/DA8/DA4 are multi-channel D/A boards with the PCI bus for IBM or compatible PC. The PIO-DA16/DA8/DA4 offers 16/8/4-channels double-buffered analog output. The output range may be configured in different ranges: $\pm 10V$, $\pm 5V$, $0\sim 10V$, $0\sim 5V$ voltage output, or $4\sim 20$ mA, $0\sim 20$ mA sink current loop.

The innovative design improves several drawbacks of the conventional D/A boards. For example:

1. Jumperless and without Trim pot.
2. The calibration is performed under software control and eliminating manual Trim pot adjustments. The calibration data is stored in EEPROM.
3. Each channel can be selected as voltage or current output.
4. High channel count output can be implemented in half size.

Applications

- Programmable voltage source
- Programmable current sink
- Harsh environment operation
- Process control

PIO-D168/D144/D96

PCI bus 168/144/96-bit OPTO-22 compatible DIO board

Features

- 32-bit +5V PCI Bus, Plug & Play
- 168/144/96-channel digital TTL/DTL I/O
- All I/O lines buffered on the board
- Emulate 7/6/4 industry standard 8255 PPI mode 0
- Direct interface with OPTO-22 compatible I/O modules
- High output driving capability
- Programmable direct-trigger interrupt source
- DIO response time is about 0.77 us (1.3 MHz max.)

Functional Description

PIO-D168/D144/D96 are high density parallel digital I/O board equipped with 168/144/96-channel bi-direction I/O. The header connectors are fully compatible with industry OPTO-22 standard. The PIO-D168/D144/D96 emulate mode 0 of the industry standard 8255 programmable peripheral interface (PPI) chips. Each PPI offers three 8-bit ports, Port A, Port B and Port C. All groups are configured as inputs upon power-up or reset.

The flat cable can be connected to ADP-37/PCI or ADP-50/PCI adapter. The adapter can be fixed on the chassis. Refer to the above figure. It can be installed in a 5 V PCI bus and can support truly "Plug & Play."

Applications

- Factory Automation
- Laboratory Automation
- Communication Switching
- Industrial Automation

Specifications

- All inputs & outputs are TTL compatible
- Input Logic high voltage: 2.4V min
- Input Logic low voltage: 0.8V max

PCI Digital I/O Board

PIO-D48

PCI bus 48-bit OPTO-22 compatible DIO board

Features

- 32-bit +5V PCI Bus, Plug & Play
- 48-channel digital TTL/DTL I/O
- All I/O lines buffered on the board
- Emulate 2 industry standard 8255 PPI mode 0
- Direct interface with OPTO-22 compatible I/O modules
- High output driving capability
- Programmable direct-trigger interrupt source
- On-board 8254 timer/counter chip
- Interrupt source: timer, event, direct trigger
- Pull-up or pull-down resistors on I/O lines
- DIO response time is about 0.77 us (1.3 MHz max.)

Functional Description

The PIO-D48 provides 48 TTL digital I/O lines. The PIO-D48 consists of two 24-bit bi-direction ports. Each 24-bit port supports three of 8-bit groups (A, B, C) and the port C can be divided into 2 nibble_wide (4-bit) ports. Each 8-bit group can be configured to function as either inputs or latched outputs. All groups are configured as inputs upon power-up or reset. Outputs of the I/O buffers are pulled up through 10K resistors to +5VDC. Outputs can be changed to pull-down by jumper selection on the board. This pull-up / pull-down mechanism assures that there are no erroneous outputs at power-up until the board is initialized by application software.

The PIO-D48 has one D-sub connector and one 50-pin flat-cable header. The header can be connected to a 50-pin flat-cable. The flat-cable can be connected to ADP-37 / PCI or ADP-50 / PCI adapters. The adapter can be fixed on the chassis. It can be installed in a 5 V PCI bus and can support truly "Plug & Play".

PCI Digital I/O Board

PIO-D64

PCI bus 64-bit DIO board with timer/counter

Features

- 32-bit +5V PCI bus, Plug & Play
- 32-channel digital input
- 32-channel digital output
- 3 independent programmable 16-bit down counters
- Four clock sources: 2M, 1M, 500K, 250KHz
- Three frequency divider: 100,10,1
- One 16-bit counter, one 32-bit timer with a 4 MHz for interface function
- Interrupt source: timer, event and direct trigger
- One breadboard area for add-on circuitry
- DIO response time is about 0.77 us (1.3 MHz max.)

Functional Description

The PIO-D64 provides 32-channel digital input, 32-channel output and 6-channel counter/timer. The user can use the DB-16P to connect the input ports (CN2, CN4) for isolation purpose, or use DB-16R to interface to the output ports (CN1, CN3) for relay control. The first 8254 chip is used as general purpose timer/counter, such as frequency measurement, event counting and pulse generation. The second 8254 chip is used to generate interrupt trigger signal. The Counter 3 accept event signal and it will generate trigger signal of interrupt. The Counter 4 and Counter 5 are cascaded together. The clock source is 4MHz. It is used to generate pacer timer trigger for interrupt.

Applications

- Factory automation
- Laboratory automation
- Communication switching
- Industrial automation

PIO-D56/D24

PCI bus 56/24-bit DIO board

PIO-D56

PIO-D24

Functional Description

The PIO-D56/D24 consists of one 24-bit port, one 16-bit input port and one 16-bit output port (only for PIO-D56). The 24-bit port emulate mode 0 of the industry standard 8255 programmable peripheral interface (PPI) chip. Each PPI offers three 8-bit ports, Port A, Port B and Port C. The 24-bit bi-directional ports are configured as inputs upon power-up or reset.

Applications

- Factory automation
- Laboratory automation
- Communication switching
- Industrial automation

Specifications

PCI Timer/Counter Board

PCI-TMC12A

PCI bus 12-channel timer/counter board

Features

- On-board four 8254 timer/counter chips
- 12 independent 16-bit timer/counter
- 12 external clock input
- 12 external gate control input
- 12 timer/counter output
- All Signal are TTL compatible
- 16-bit timer/counter can be cascaded to 32/48-bit
- Gate input can be from external or previous timer/counter output
- 4 internal interrupt source: COUT3, COUT6, COUT9, COUT12
- 2 internal clock source: 8M/1.6M, 0.8M/80K
- 16-channel D/I; 16-channel D/O

Functional Description

The PCI-TMC12A is a PCI bus general purpose timer/counter and digital I/O board. It provides twelve channels of 16-bit Timer/Counter. Two internal clock sources (8M/1.6M and 0.8M/80K) are selected by jumper.

Applications

- Event Counting
- Wave Generator
- Frequency Measurement
- Pulse Width Measurement
- Time-delay generation

PCI Relay Output Board

PCI-P8R8/P16R16

8/16-channel isolated input & 8/16-channel relay output board

PISO-P16R16U

Universal PCI, 16-channel isolated digital input, 16-channel relay output board

Features

- 32-bit +5V PCI Bus (PCI-P8R8, PCI-P16R16)
- 32-bit +5V and +3.3V PCI bus (PISO-P16R16U)
- 8/16-channel electromechanical relay output
- 8/16-channel optically isolated digital input
- AC/DC signal input
- AC signal input with filter
- On-board LED indication for relay status
- On-board CardID dip-switch (PISO-P16R16U)

Functional Description

The PCI-P8R8 provides 8-channel electromechanical relay output and 8-channel optically isolated input. The PCI-P8R8 can be used in various applications including load switching, external switching, contact closure and others. The PCI-P16R16 has one of 37-pin D-Sub & one of 40-pin header connectors and the function is equal to two PCI-P8R8.

The PISO-P16R16U is a universal PCI version of the PCI-P16R16 card, it can be installed in a 5V or 3.3V PCI bus.

Applications

- Factory Automation
- Laboratory Automation
- Communication Switching

PISO-P32A32/P32C32/P64/A64/C64

64-channel isolated digital I/O board

PISO-P32A32

Functional Description

The PISO-P32A32/P32C32/P64/A64/C64 provide 64 optically isolated digital input and/or output channel, arranged into four isolated banks. Each input channel use a photo-coupler input which allows either internal isolated power supply or external power selected by jumper. Each digital output offers a PNP transistor (PISO-P32A32/A64) or Darlington transistor (PISO-P32C32/C64) and integral suppression diode for inductive load. The power supply of the input port may use the external power or the power from the PC side using DC/DC converter. The power supply of the output port should use the external power. This interface board is easily installed in any PC. The board interface to field logic signals, eliminating ground-loop problems and isolating the host computer from damaging voltages. The PISO-P32A32, PISO-P32C32, PISO-P64, PISO-A64 and PISO-C64 has one 37-pin D-Sub connector and one 40-pin male header. The 40-pin to DB-37 flat-cable is used to fix with the case.

The user can use the DB-16P16R to connect the input ports (CON1) of the PISO-P32C32 for relay output.

Also use the DB-32R to connect the input ports (CON1) of the PISO-C64 for relay output.

8-channel Relay Output 8-channel Isolated Digital Input Board

- 32-bit +5V PCI Bus, Plug & Play
- 8-channel isolated digital input
- State-changed interrupt for all digital inputs
- Digital input can be isolated or non-isolated selected by hardware jumper
- 8-channel electromechanical relay output
- One Form C for user's external device
- Another Form C for relay status read back
- On-board LEDs indicate output state

The PISO-725 provides 8-channel electric mechanical relay output and 8-channel digital input. The digital input channels can be isolated or non isolated that is selected by hardware jumpers. All digital inputs can generate an interrupt if any state change occurs at any one or more of the inputs. This is very useful when monitoring contact closures/ openings since continuously polling the input is not necessary. All relays are de-energized at power-on. On/Off status of the relays can be read back. The PISO-725 can be used in various applications including contact closure checking, external voltage sensing, and loading sensing and control and sensing applications.

Functional Description

The PISO-730/730A provides 32-channel isolated digital I/O and 32-channel TTL-level digital I/O. Each of the 16 isolated digital output channel equipped a Darlington transistor (PISO-730) or PNP transistor (PISO-730A). The board can interface to field digital logic signals to eliminate ground-loop problems and isolate the host PC from damaging voltages.

- Input impedance: 1.2K Ω , 0.5W
- Response time: 4KHz max

16 TTL-level Inputs

- Input high voltage: 2.0V min
- Input low voltage: 0.8V max
- Response time: 30KHz typical

16 Isolated Digital Outputs

- Output voltage:
 - open-collector 5~30VDC (PISO-730)
 - open-collector 10~30VDC (PISO-730A)
- Sink current: 100 mA/channel, 200 mA max
- Source current: 100 mA/channel
- Response time: 30KHz max

16 TTL-level Outputs

- High: Source 0.4 mA at 2.4V min
- Low: Sink 8 mA at 0.5V max

Features

- 16-channel isolated digital input and 16-channel isolated open-collector output
- 16-channel TTL input and 16-channel TTL output
- Built-in DC/DC converter built-in
- 2500VDC isolated voltage (PISO-730)
- 3750VDC isolated voltage (PISO-730A)
- Sink current output (PISO-730)
- Source current output (PISO-730A)

General Specifications

- I/O connector: one 37-pin D-sub female
two 20-pin ribbon male
- Power requirements: +5V @ 640 mA
- Operating temperature: 0 ~ 60°C
- Operating humidity: 0 ~ 90% non-condensing
- Storage temperature: -20 ~ 70°C
- Dimensions: 180 mm x 105 mm

Ordering Information

Standard

- PISO-730:** 32-channel isolated digital I/O & 32-channel TTL digital I/O board. (current sinking)
- PISO-730A:** 32-channel isolated digital I/O & 32-channel TTL digital I/O board. (current sourcing)

Optional

- DN-37:** Two 37-pin connector DIN-rail mounting terminal board
- DB-37:** 37-pin D-sub directly connector terminal board
- DN-20:** Two 20-pin header DIN-rail terminal board
- DB-16P:** 16-channel isolated DI/O board
- DB-16R:** 16-channel relay board
- ADP-20/PCI:** 20-pin extender
