ISA Analog Input Board

ISO-AD32

32-channel 12-bit 200KS/s isolated analog input board

Functional Description

The ISO-AD32H/L (H for high gain; L for low gain) is a bus-type isolated 12-bit A/D board for PC/AT compatible computers. The isolation inputs can operate up to 500Vrms of common-mode voltage. The ISO-AD32H/L features a 200KHz 12-bit analog-to-digital converter, on board 1 K bytes FIFO buffer, 32 single-ended or 16 differential analog input channels. The analog input allows auto-channel /gain scan. This board supports gap-free A/D conversion at 200KHz sampling rates for single channel or 100KHz sampling rates for channel scanning.

The "Hands-Off" design permits all board parameters (channel selection, gain, input type, operating mode) to be performed in software. Once installed, user will never have to worry again.

The innovative design improve several drawbacks of the conventional isolated A/D card. Such as:

A-821PG

16-channel 12-bit 45KS/s multi-function board

Single-ended & Differential Input

The A82X series provides 16-channel single-ended or 8-channel differential analog input. Single-ended inputs are all referenced to a common ground point. They are typically used when the input signal are greater than 1 volt, the lead wires from the signal source to the analog input hardware are short (less than 5 meter), and all input signals share a common ground reference. If above criteria do not meet, you should use differential inputs.

The common-mode noise can be canceled, when the input is configured in differential mode.

ISA Digital I/O Board

DIO-144/96/48/24

144/96/48/24-bit OPTO-22 compatible DIO board

DIO-144

Functional Description

The DIO-144/96/48/24 are high density parallel digital I/O Board with 144/96/48/24 bi-direction I/O channels. The header connectors are fully compatible with industry OPTO-22 standard. The DIO-144/96/48/24 emulate mode 0 of the industry standard 8255 programmable peripheral interface (PPI) chips. Each PPI offers three 8-bit ports, Port A, Port B and Port C. The Port C is divided into 2 nibble-wide (4-bit) ports. All groups are configured as inputs upon power-up or reset.

The DIO-48 has one 8254 Timer/Counter chip, one 16-bit counter accept event signal (P2C0) and it will generate trigger signal of interrupt. The other 32-bit counter is used to generate pacer time trigger of interrupt. The clock source is 32.768KHz, 2MHz, 4MHz or 8MHz.

ISA Digital I/O Board

DIO-64

32 digital input & 32 digital output with timer/counter board

Functional Description

The DIO-64 provides 32-channel digital input, 32-channel digital output and 6-channel counter/timer. The DIO-64 consists of two 16-bit input ports and two 16-bit output ports. The user can use the DB-16P to connect the input ports (CN2, CN4) for isolation purpose, or use DB-16R to interface to the output ports (CN1, CN3) for relay control. The first 8254 chip is used as general-purpose timer/ counter, such as frequency measurement, event counting and pulse generation. The second 8254 chip is used to generate interrupt trigger signal. The Counter 3 accept event signal and it will generate trigger signal for interrupt. The counter 4 and counter 5 are cascaded together. The clock source is 4MHz. It is used to generate pacer timer trigger for interrupt.
