Block Diagram of I-8000

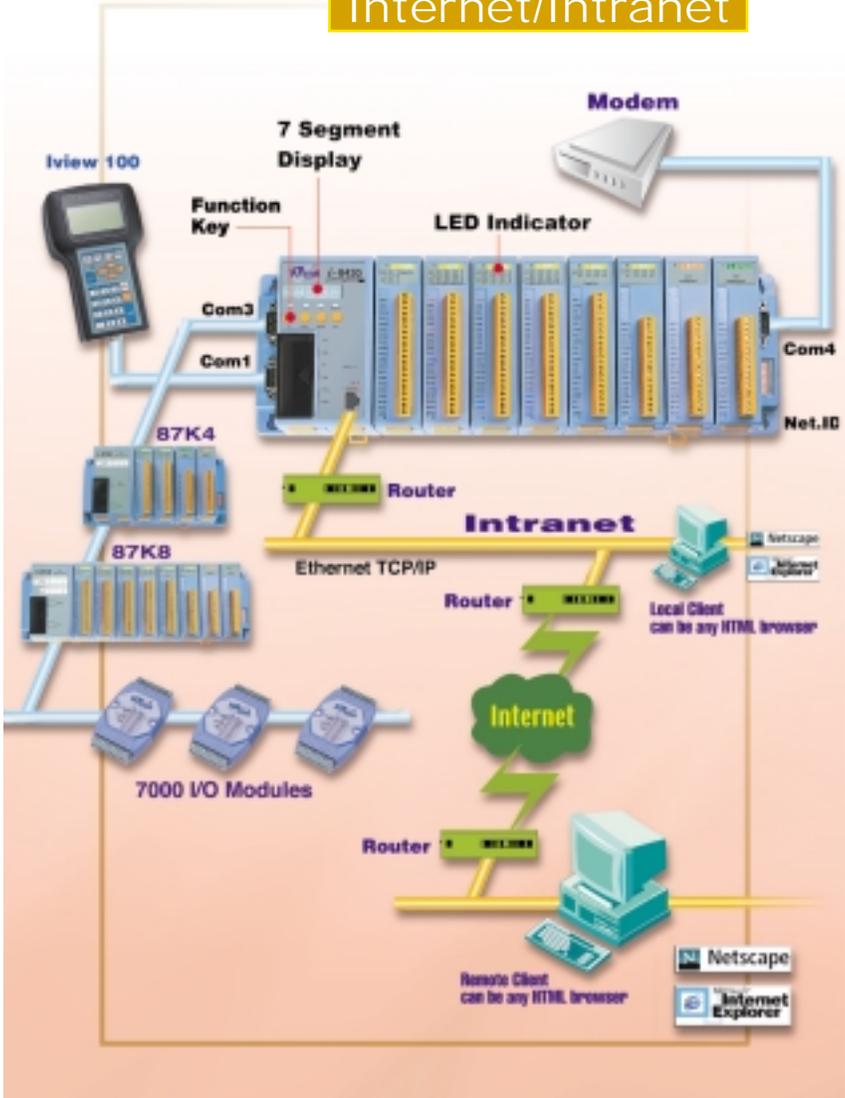

## Introduction

The 8000 is a modular network based system with the capability of connecting I/O either through its own local bus or alternatively through I/O expansion or network extension. The unit comprises a main control unit with a range of standard communication interfaces, and an I/O bus permitting I/O expansion. The bus is hybrid in nature providing the facility to connect either serial or parallel I/O modules. The parallel bus is used for high-speed data transfer. The unit can communicate either using serial communications (RS232, RS485), Ethernet, or CANbus. The Ethernet version of the product supports an integrated web server permitting Internet and Intranet applications.

The 8000 can be used as an intelligent distributed data acquisition front end connected to a Host machine running a standard SCADA package, or alternatively it can be user programmed as an autonomous controller running an embedded software application. Significant non-volatile memory is available for data and program storage. The product is made up of four basic components: 1. Main Control Unit (MCU) 2. I/O Expansion Unit 3. I/O modules 4. Embedded OS.

All I-8000 embedded controller equip MiniOS7 embedded OS. It is developed by ICP DAS Co., LTD and compatible to DOS. MiniOS7 has more features than regular DOS in embedded applications, such as shorter power-up time, built-in hardware diagnostic function, directly support I-8000 and I-7000 modules without library, directly support internal or movable memory devices.

### What is ISaGRAF ?

ISaGRAF was the first Windows-based development environment to fully support all five of the PLC languages : Ladder Diagram (LD), Function Block Diagram (FBD), Sequential Function Chart (SFC), Structured Text (ST), and Instruction List (IL). Additionally, for the ultimate in power and flexibility, ISaGRAF supports functions and function blocks written in C and/or IEC61131-3 languages. Applications for ISaGRAF range from simple machine control to complex processes to high speed, high performance and high reliability tasks.

### ISaGRAF and I-8XX7 series

The ISaGRAF application can be easily applied on 84X7/88X7 series. There are 3 advantages by adding ISaGRAF programming. The first is the PLC language is easy to design. Instead of the C language, ISaGRAF supports all five IEC61131-3 languages plus Flow Chart language (FC).

The second is the powerful communication ability. There are 4 communication ports on the 84X7/88X7 controllers. The third advantage is the integration to SCADA software and HMI become easy and powerful by choosing the Modbus protocol. SCADA is such as Intouch, FIX, Wizcon, Citect ... HMI is something like Touch 200 touch panel or any hardware or software that support Modbus protocol.

From now on, get rid of hand coding.

The fastest and easiest solution to implement your real-time embedded designs and control system development.

## Introduction

The Matlab Embedded Controller are designed to work with MATLAB (6.0) / Simulink / Real Time Workshop Embedded Coder and Stateflow / Stateflow Coder (optional) for industry applications. It equipped with various I/O (DI/DO, AD/DA, RS232/485 and Ethernet Interface) and can be used in harshness environment. Over 30 IO Bridge and system-level Simulink blocksets have been developed. These blocksets has been integrated to work with Stateflow, RTW and Coders. By using Simulink developing environment and Matlab Embedded Controller's blocksets, application algorithm such as: Arbitrary Waveform Generator, Data Acquisition, Timer, Addressable RS232/Ethernet Protocol Converter and PLC applications can be easily constructed and verified. Once the algorithm been verified, user can convert model to executionable code and downloading to controller by just one click. Hand coding is no longer needed when using RP Controller. Engineer can more focus on algorithm design and system validations.

Benefits1. Magically compress your design cycle 2. Small but smart 3. Easy to use, easy to design 4. Robust itself 5. Strong technical support 6. Cost-effective solution.

Software Requirement: MATLAB, Simulink, Stateflow, Real-Time Workshop, Real-Time Workshop Embedded Coder
