

Start Web Server by Using “InduSoft NTWebServer” (v1.0)

Users usually use Internet Information Service (IIS) to start web server on PC; however, the IIS service is only available on Windows 2000 / NT / XP Profession. If users develop system on Windows XP Home Edition without IIS Service, users will not be able to publish web pages. In order to solve the problem, Indusoft provides NTWebServer.exe to users. It is fast and easy to use for every platform. After saved screens as html files, please follow steps list below :

1. Copy “**NTWebServer.exe**” from **Indusoft installation folder/Bin/**, for example, C:\Program Files\InduSoft Web Studio v6.1\Bin\ to **Web directory in current project folder**.
2. Execute “NTWebServer.exe” in Web directory.
Note: If message showed “Listen Fail”, please open **Control Panel -> System Manager -> Service** to turn off **World Wide Web Publishing** service and then run NTWebServer.exe again.
3. Start up InduSoft application.
4. Open Web Browser and type in **IP Address/Screen Name.html** such as 192.168.0.1/main.html. You should be able control Indusoft application through web browser now.
