

Water Refilling Station Automatic System

Nowadays, people are eager for seeking the reliable clean water for the use in their daily life. This basic requirement results in the great numbers of demand for water refilling stations. In order to effectively monitor and manage those equipments the station manager adopts GT-530, an intelligent SMS alarming controller, to monitor the machine's operation. GT-530 not only has the burglar-proof system, but also equips with the counter function to help the manager understand their daily business volume and transaction precisely by SMS.

In addition, GT-530 can immediately and automatically reports to the manager when and where some accidents happened by SMS as well. Therefore, GT-530 is definitely the wonderful solution for saving labor forces and realizing smart control to more and more water refilling stations and other vending machines.

System Features:

1. Business condition timing report
2. Water deficit alarm/Entrance guard management
3. Li Battery Backup
4. Alarm receiver signal to multi-group relevant or security personnel

System required:

1. The main controller in every water refilling station: GT-530
2. Management center: PC+ GTM-201-RS232 GPRS/GSM modem
