- For Desktop Web

1

Hardware Installation

Before using I-7532RM-FD device, some things must be done.

Step 1: Prepare one I-7532RM-FD

Step 2: Determine if the terminal resistor is needed or not

Check the application structure, and determine if the terminal resistor is needed or not. You can find it at the position as follows.

	Pin No.	Description
	1	ON: Active CAN1 terminal resistor (default) OFF: Inactive CAN1 terminal resistor
	2	ON: Active CAN2 terminal resistor (default) OFF: Inactive CAN2 terminal resistor

Generally, if your application is as follows, we recommend you to enable the terminal resistor.

If your application is like the structure as follows, the terminal resistor is not needed.

Step 3: Connect the CAN port, USB and power line of the I-7532RM-FD.

The pin assignment and wire connection are as follows. When finished, run your application with the I-7532RM-FD.

2

Utility tool

When users want to use user-defined CAN/CAN FD baud rate, CAN/CAN FD message filter and CAN mapping, merging, splitting rules, I-7532-FD Utility tool may be needed.

Step 1: Install the I-7532-FD Utility

The software is located at:

<https://www.icpdas.com/en/download/show.php?num=8887>

Step 2: Setting up I-7532RM-FD module

1. Connect the PC available USB port with the USB port of the I-7532RM-FD. Uses a USB Type C cable to connect the module to the PC.

2. Power On the module and execute the I-7532-FD Utility tool.

Step 3: Connect and get module's configuration

Press the “Refresh” button to scan and list all the necessary I-7532RM-FD modules on “Module Name” location.

The interface shows a text box labeled "Module Name" containing the value "I-7532-FD (1A27E404)". To the right of the text box is a "Refresh" button.

Then select the necessary I-7532RM-FD module and press “Get Device Config.” button to start to connect and get device configuration.

The interface shows four buttons: "Get Device Config.", "Config. Device", "Load Config. From File", and "Save Config. To File".

Step 4: Configure CAN Bus parameters

User can configure the CAN controller mode, CAN FD specification, arbitration/data-phase bit rate and advanced forwarding rule.

The screenshot shows the "I-7532-FD_Utility v1.0.0.0" window with the "CAN" tab selected. The window has a menu bar with "File" and "Help". The tabs are "Basic", "CAN", "Filter", "Mapping Rule", "Merging Rule", and "Splitting Rule". The "CAN" tab is active, showing configuration for CAN1 and CAN2. For each, the "CAN Controller" is set to "CAN FD" and the "CAN FD Spec." is set to "ISO". The "Arbitration bit rate" is set to "1000.000 kbps" and the "Data-Phase bit rate" is set to "3000.000 kbps". The "SP" (Sampling Period) is set to "87.50 %". There is an "Advanced settings" button under the "Forwarding Rule" section. A "Confirm" button is at the bottom right.

[CAN Controller]

Set the CAN port into CAN or CAN FD mode. When setting the CAN port into CAN FD mode, the CAN port can process CAN/CAN FD frames, otherwise this port just can process CAN frame.

[CAN FD Spec.]

Set the CAN FD frame of the CAN port follows ISO or Non-ISO specification. For “ISO” specification setting, the module uses the CAN FD frame format as specified by the ISO11898-1. For “Non-ISO” specification setting, the module uses the CAN FD frame format as specified by Bosch CAN FD Specification V1.0.

[Arbitration bit rate]

CAN/CAN FD arbitration phase bit rate. Valid range: 10 kbps ~ 1000 kbps.

[Data phase bit rate]

CAN FD data phase bit rate. Valid range: 100 kbps ~ 10000 kbps

[SP]

CAN/CAN FD arbitration/data phase bit rate sample point.
Suggested range: 75.00 ~ 87.50 %

Step 5: Setting CAN filter ID

The “Reject Remote Frame” is used to reject remote standard / extended frame. And the “Standard ID/Extended ID” field is used to set accepted standard/extended CAN IDs (using white-list rule).

[Reject Remote Frame] block:

Reject Remote Frame
☐ Reject Remote Standard Frame
☐ Reject Remote Extended Frame

Click the “Reject Remote Standard/Extended Frame” item to select whether to reject remote standard/extended CAN frame or not

[Standard ID/Extended ID] block:

Standard IDExtended ID

Acceptance CAN ID (HEX)
From To

No	From CAN ID(hex)	To CAN ID(hex)
----	------------------	----------------

AddDeleteClear

Press the “Add”, “Delete” button to add/delete a range of standard/extended CAN ID into filter frame.

Step 6: Setting CAN forwarding rules

Detail information about how to configure CAN mapping, merging, splitting rules, please refer to section “3. Software Utility” of I-7532RM-FD user’s manual.
