

PMC-2241M-iWSN Release Note

[2026-04-10] v1.1.1.0 Changelog

- Improved kWh precision: Updated data type from float to double (Modbus register addresses remain unchanged).
- Fixed a functional error in PUE configuration settings.
- Algorithm Optimization:
 - Adjusted the calculation method for per-minute historical logs.
 - Updated the Power Factor (PF) calculation logic for Daily and Monthly reports.
- Security & System Maintenance:
 - Enhanced Security: The FTP server is now disabled by default after a factory reset to prevent potential network attacks.

[2025-06-19] v1.1.0.0 Changelog

- Firmware file CRC check and firmware restoration functionality.
- Support for sending IoTstar Alarm notifications.
- Support for sending messages via Telegram.
- Support for LINE Messaging API push message function.
- Removed the LINE Notify message sending function.
- Fixed the issue where the "Silent Interval" setting did not update after being saved.
- Fixed an issue where deleting the iWSN-200E(U) module caused a malfunction on the Main Page.
