

Instant Emergency Call Fast & Convenient Wireless Deployment

Wireless Emergency SOS System

iSOS Emergency Call

Features

- ◆ Built-in rechargeable battery for fast construction.
- ◆ Actively upload module status to ensure operation.
- ◆ Charged by indoor lighting.
- ◆ Adopt Sub 1GHz wireless transmission technology.

Trigger

Full Time
Monitoring

The emergency SOS system is used in various enterprises, hospitals, and schools to build an effective protection and SOS system in public spaces to provide reliable, rapid, and effective returns, and to avoid regrets caused by processing delays. Once a distress call is triggered, the system can respond to the event immediately.

Sub-GHz Wireless Transmission

- ◆ **Long Transmission Distance:**
The transmission distance is up to 100 meter with great diffraction.
- ◆ **Interference-free:**
The frequency band is mostly used for dedicated and low duty cycle connections. It is not easy to be disturbed, making data transmission more stable.

Actively receive/pay audible and visual alarms

When the iSOS emergency button is triggered, the iSOS-ALM-Horn receiver signal is triggered by wireless signal synchronization, and the buzzer and warning light are activated immediately.

Diversified Power Supply

Parking lots

◆ Integrated iWSN-200R Alarm Relay Auto Output

The iWSN-200R is equipped with a built-in relay, which immediately outputs and controls related alarm devices when the iSOS button trigger signal is received.

◆ IP65 Protection Design

The iSOS-300-IP65 is designed to withstand water penetration under strong wind and rain with an IP65 rated waterproof mechanism.

◆ Active Uploading of Power & Status

Timely report the existing power and operating status of the emergency button, the monitoring side to effectively ensure the stable operation of the system. When an abnormality occurs, personnel can take advantage of the immediate response, maintenance and replacement.

◆ Uninterrupted with Light Charging

Using dye-sensitized photovoltaic technology to supply power, the cumulative battery capacity is 1.68 times higher than that of silicon batteries. Charging of the device can be done by ambient light source, and the conversion efficiency is not affected by the light angle, which can meet the long-time operation without power supply.

◆ Scalable integration Capability with iWSN Sensors

The signal concentrator not only connects to the iSOS series emergency button, but also integrates iWSN power measurement and environmental monitoring modules to extend more intelligent applications.

Support Power & Environmental information Measurement Expansion Module

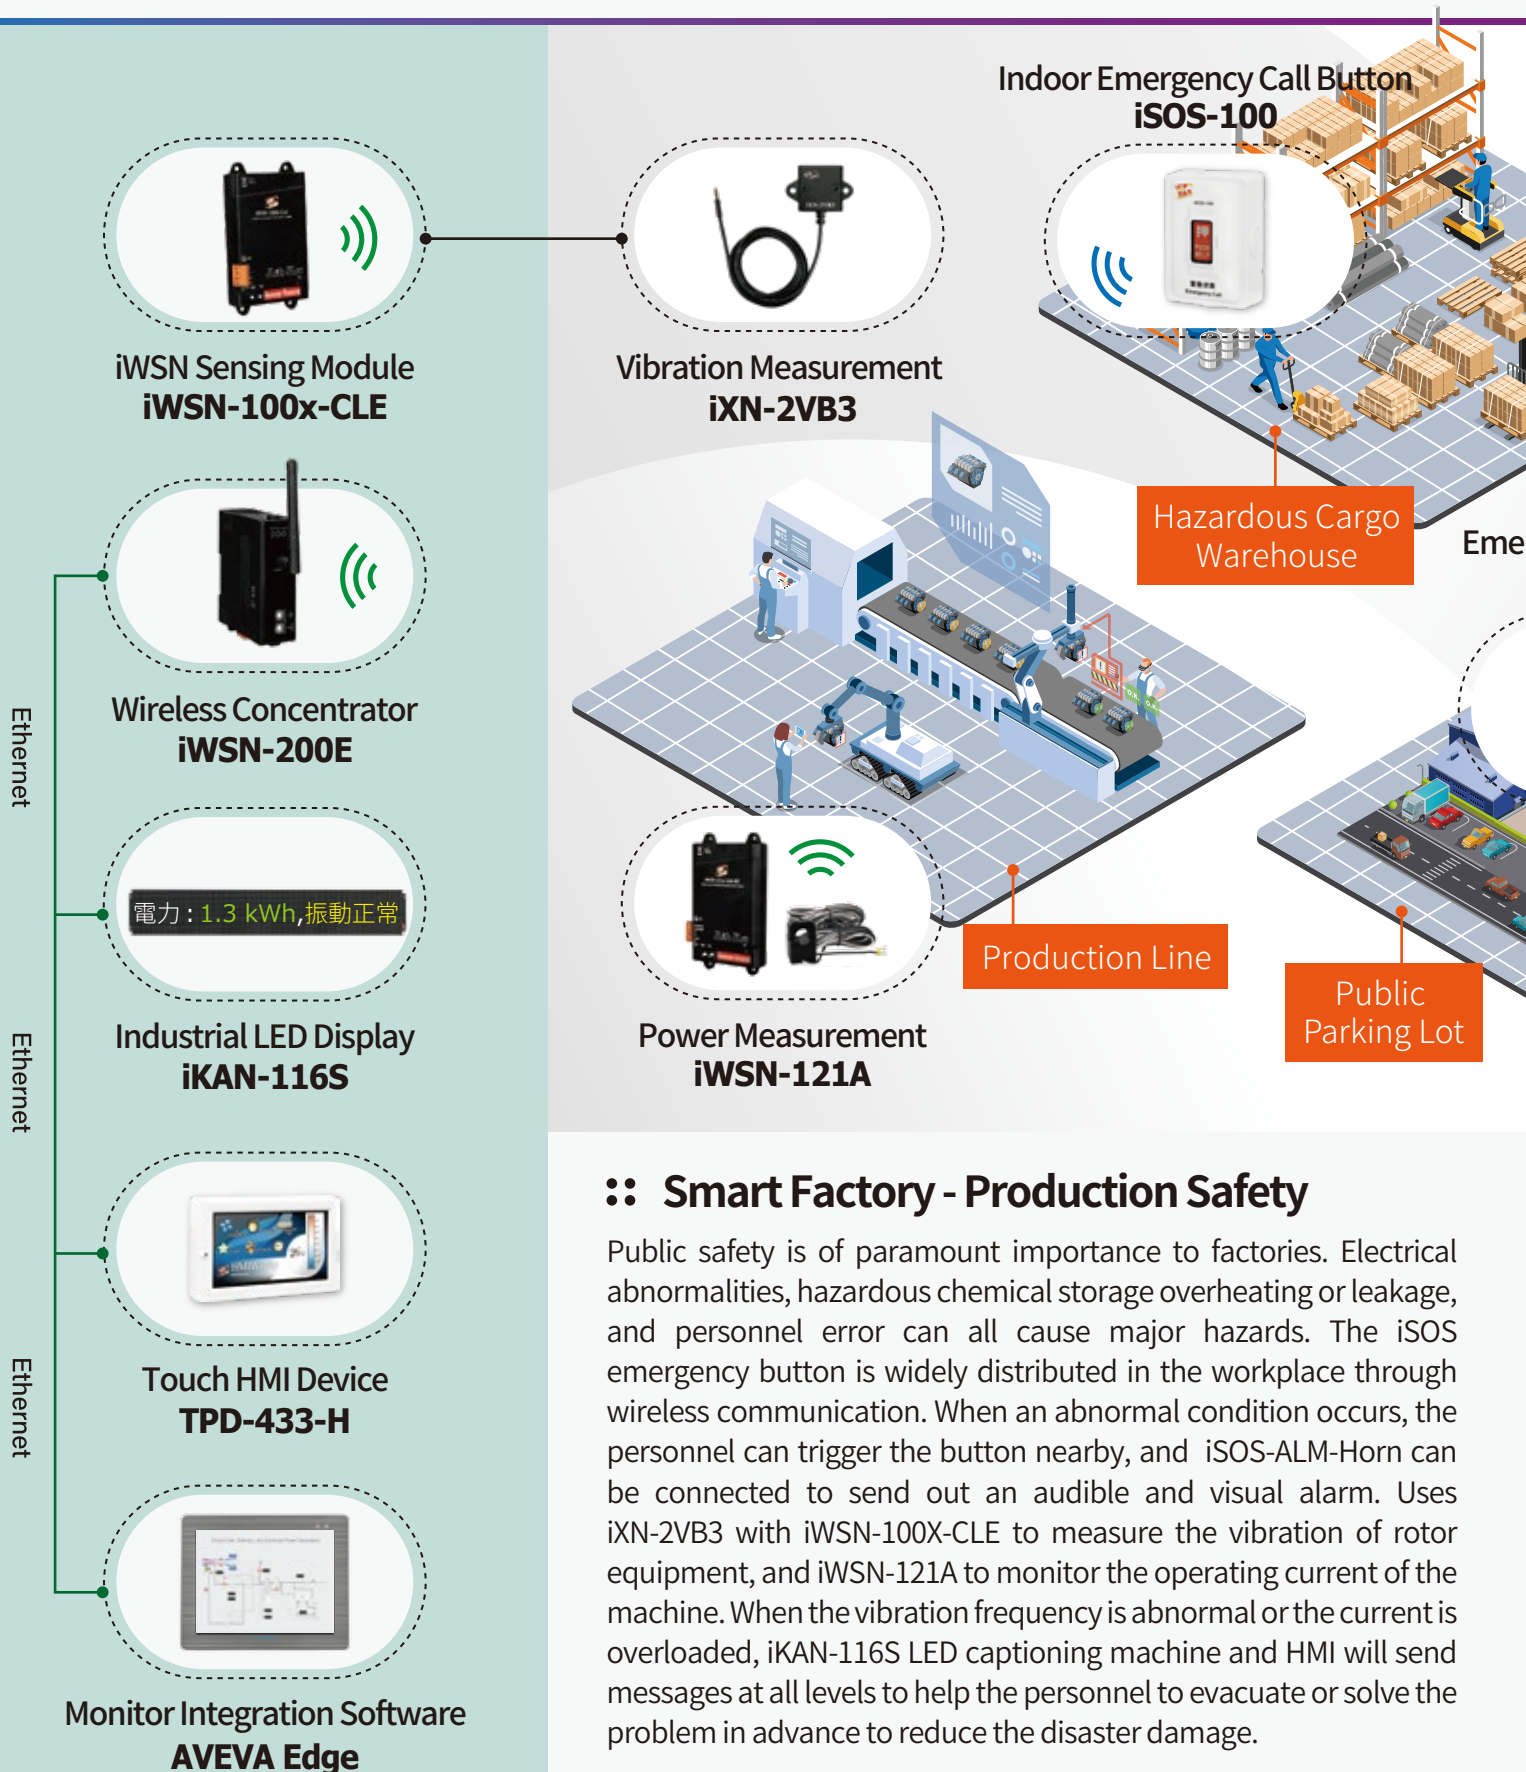

- Power Informations
Voltage, current, instantaneous power, power, etc.
- Environmental Informations:
Temperature (Thermal resistance, Thermal imaging), Humidity, Vibration, Gases, etc.
- Improve the safety of the production environment and the stability of the operation of the equipment, and to implement preventive maintenance.
- Installed without downtime to meet rapid deployment needs in the field

Wireless Smart Security Solutions

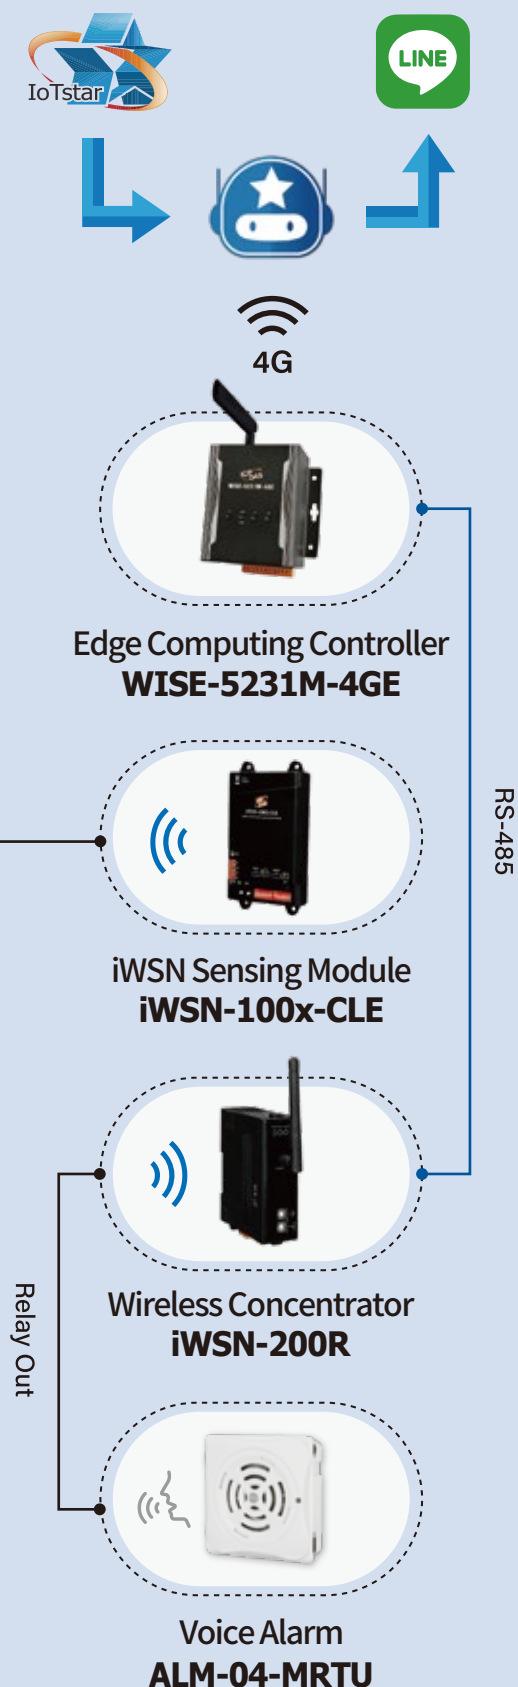

The iSOS emergency call button can be integrated with iWSN environment sensing module and WISE edge computing controller to monitor power, temperature and humidity, thermal imaging, gas, vibration data of each field and manage data remotely and graphically in the emergency system architecture. When the iSOS emergency button is triggered or the monitoring data is abnormal, the WISE Edge Computing Controller will take the initiative to send an alarm notification so that the management can get the information immediately.

:: Smart Park - from A to Z in Public Safety

In industrial parks (including public spaces and parking lots), the iSOS-300-IP65 emergency call button can be widely installed in outdoor environments to facilitate triggering of the button in case of emergency. The iWSN-200R actively outputs Relay to trigger the ALM-04-MRTU, and then the system will send out a LINE messages to the management via WISE-5231M-4GE for immediate response. In addition to the emergency call button, the iWSN-930R-LK-AC-IP33 can be installed in the parking lot to detect the leakage of water in the rain. The iXN-1CX with iWSN-100X-CLE can be added to detect the concentration of CO indoors and send a LINE message when the data is abnormal to reduce the possibility of hazards.

:: Safety Processes - Steelworks Applications

Steel plants are high-temperature, high-risk environment, the process of safety protection must be precise and comprehensive.

ICP DAS provides the following solutions:

- ◆ iSOS-800-PT handheld wireless emergency alarm button is used to trigger the identification program.
- ◆ iCAM-ZMR8422X sends back a live image, and the program determines whether the tank contains water and controls the PET-7060 output and traffic signal.
- ◆ WISE-5231M-4GE pushes the result and screen to WeChat or LINE for report confirmation.

:: Smart Inspection - Plant Safety Inspection

Owners spend a lot of manpower and material resources on public security inspection and audit every year to avoid abnormalities in equipment, pipelines or personnel violations.

ICP DAS provides the following solutions:

- ◆ With iSOS-800-PT, the auditor detects abnormalities or triggers a notification when a hazardous incident occurs.
- ◆ Use iCAM-ZMR8422X to capture the image of the site remotely to grasp the real-time situation and upload it to the database for reference.
- ◆ Send SMS via WISE-5231M-4GE, relevant personnel can confirm on WeChat or LINE.

:: Safe Workplace - Bathroom Emergency System

In order to improve the safety of the workplace environment, companies want to install an emergency distress system in their factories to enhance personal safety protection.

ICP DAS solutions are as follows:

- ◆ iSOS-109 emergency button is paired with SP-S2-DS dye-sensitized cell charging module to power the module through indoor lighting.
- ◆ The iWSN-100X-CLE with iXN-0TH sense the ambient temperature and humidity, and the records are stored in the XP-9000 controller for subsequent trace analysis.
- ◆ When an emergency occurs, iSOS-109/S2 will activate iSOS-ALM-Horn audible and visual alarms to notify the relevant personnel to handle the situation.

:: Safe Medical - Medical Safety Monitoring

Hospital ward safety and temperature and humidity monitoring is a key management priority for hospitals. In order to reduce the impact of construction on patients and medical quality. ICP DAS has the following solutions:

- ◆ iSOS-109 with SP-S2-DS dye-sensitized cell charging module, iWSN-101X-CLE with iXN-0TH temperature and humidity meter for unified monitoring.
- ◆ TPD-703 HMI Device communicates with iWSN-200R and collects data, and also synchronizes data to XP-9181-IoT to meet the central monitoring needs such as panel display, data management records, report management, and alarm pushing.

Selection Guide

iSOS Emergency Call System

- ◆ Built-in rechargeable and disposable batteries for fast construction.
- ◆ Actively upload module status to ensure operation.
- ◆ Charged by indoor lighting.
- ◆ Applicable to public space safety protection and high-risk areas to call for help.
