

Classification:

Product Functionality for I-7000/M-7000 series

Question

What's the syntax of the command string?

Answer

The syntax of command string is shown as following:

```
[leading char][address][data][checksum][0x0D]
```

[leading char] = \$ or % or # or @ or ~

[address] = 00 to FF à 256 different module address max.

[data] = command code and the related data if needed

[checksum] = two chars if checksum enable

= no char if checksum disable

[0x0D] = ASCII code 0x0d, the command string terminator

<i>Command string</i>					<i>Result string</i>												
—	\$	0	1	2	0x0D	—	!	0	1	0	5	0	6	0	0	0x0D	—
