# Features comparison

## 1. Rugged RJ-45 connector for LAN1

The LX-9000 is equipped with a rugged and dustproof RJ-45 connector on the LAN1 port that is able to provide protection against both liquid and dust contaminants in harsh industrial environments, as well as protection against vibration and shock.

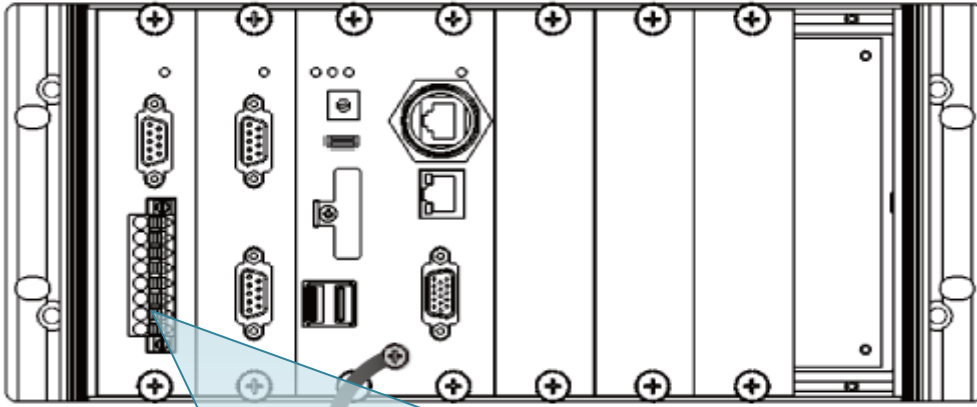

## 2. Non-volatile Memory (SRAM & MRAM)

The LX-9000 is equipped with 128 KB MRAM (Magnetoresistive RAM) which is non-volatile memory that is not subject to degradation over time and removes any limits on the stored data, even when power is lost.

The LP-8x8x series included 512 MB Dual BB SRAM. However, BB SRAM requires batteries in order to retain data. In addition, SRAM with dual battery backup only retains data for 5 years and requires maintenance in order to replace exhausted batteries. In contrast, MRAM doesn't require batteries.

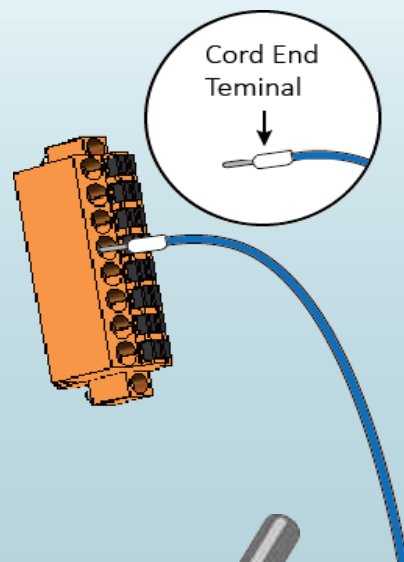

### 3. Power/Communication spring clamp terminal connector

Compared to screw terminals, the spring clamp terminal block that is used for the Power/Communication connector in the LX-9000 offers advantages including anti-vibration, stable clamping, and easier installation

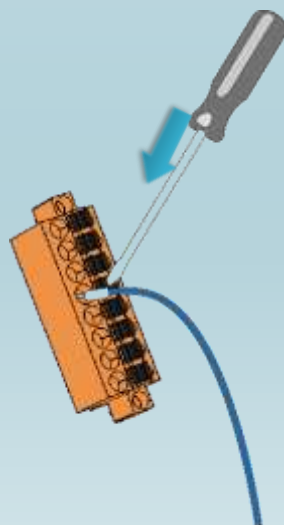

#### Wire connection

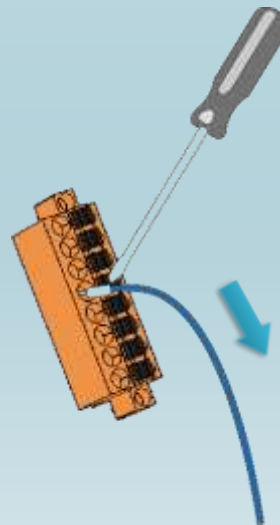

The cord end on the wire can be directly connected to the terminal

#### Wire disconnection

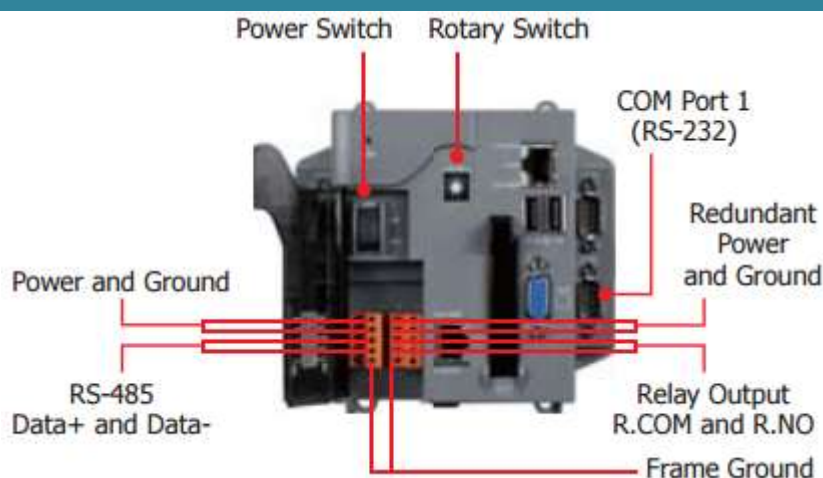

Use a screwdriver to press down the black clip.

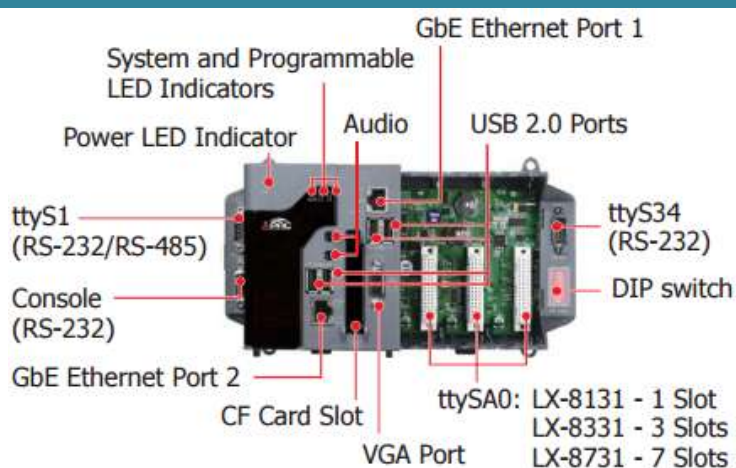

Remove the wire from the terminal block
