

Xmlmfc folder : MFC demo executable file.

**Note:**

The default working path is located at \temp on the device, so it needs to copy the executable files and all xml file to the device in the \temp directory and the all files could work.

**1. Load XML**

Print the contents of xml file (a.xml).

**2. Load Attributes**

Get the attributes of the nodes defined on the xml file (c.xml).

**3. Query Nodes**

Query XML DOM nodes defined on the xml file (d.xml).

**4. Create XML file**

Create an XML document (b.xml) dynamically.

(The a.xml/c.xml/d.xml files must be located at [\\temp](#) on PAC)
