## Q: How can the Touch PAD send and display the Russian?

A:

TouchPAD can send Russian by using TCP and Modbus TCP/RTU. For the TCP part, refer to the “TCP/IP” example, it can send and receive Russian without the settings changed. For the Modbus part, refer to the “MXXX\_ebfont\_Display\_XXXXX\_c.zip” in the “ebFont” example. Put the Russian UTF-8(hex) encoding into the data of Modbus command and set the font of the display widgets.

TouchPAD can display Russian by built-in fonts or ebFont. The built-in fonts can be used by the setting changed. It does not support Russian letters eliminated and some special characters. It only Russian and English can be used at the same time. The ebFont requires additional fonts to be installed into TouchPAD. It supports all Russian letters (but does not contain some special characters). It can use multilingual characters at the same time.

The example list of TouchPAD is below:

<http://www.icpdas.com/en/download/show.php?num=1000&root=&model=&kw=HMIWorks>

The following is a detailed operation and information.

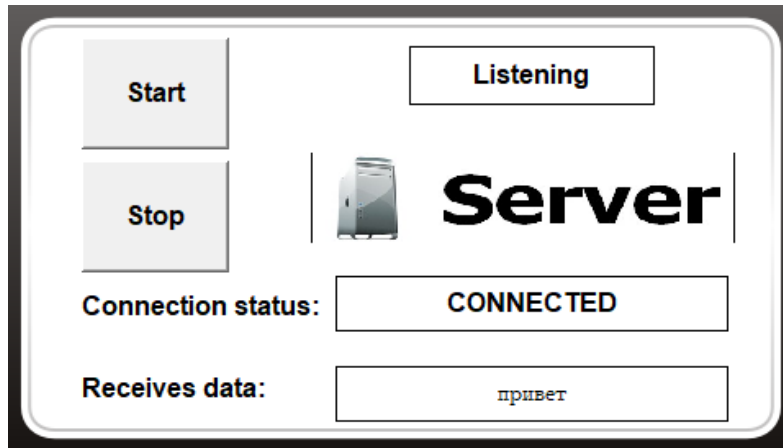

### ◆TCP

Refer to the “TCP/IP” example, use client\_c as an example, you change the content of the send\_buf to a Russian string. (displaying the Russian Label requires changing the font)

```

59  if (hmi_TCPState(h) == STATE_TCP_CONNECTED)
60  {
61      usprintf((char*)send_buf, "DATA%05d", index); → usprintf((char*)send_buf, "привет");
62      //sends data and then receives data through a TCP session.
63      hmi_TCPSendCmdEx(h, send_buf, BUF_LEN, rcv_buf, BUF_LEN, TIMEOUT);
64      rcv_buf[BUF_LEN - 1] = 0; // null-terminated
65      LabelTextSet(&Label12, (char*)send_buf);
66  }

```

### ◆ Modbus TCP/RTU

Refer to the Modbus related example in the “**ebFont**”. In this example, TouchPAD as a Modbus RTU Slave and displays value received on the Label as a string. The Master puts the Russian UTF-8 (hex) encoding into the data of Modbus command.

## Modbus RTU Slave

Send an Unicode Data (UTF-8) to the COM1

---

The Master Command Example :

01 10 00 00 00 07 0E → ID 1, Address 0, Write 7 AO

D0 BF	D1 80	D0 B8	D0 B2	D0 B5	D1 82
п	р	и	в	е	т

00 00 26 59 → End char & CRC

Received : привет

UTF-8(hex) encoding can refer to the following website:

<http://www.fileformat.info/info/charset/UTF-8/list.htm?start=1024>

**Change font of the widgets to display Russian**

## ◆ Built-in fonts

This method uses the built-in font to display Russian. The default font is English, please follow the below procedure to change it.

**The widgets can be change string when standard C run:**

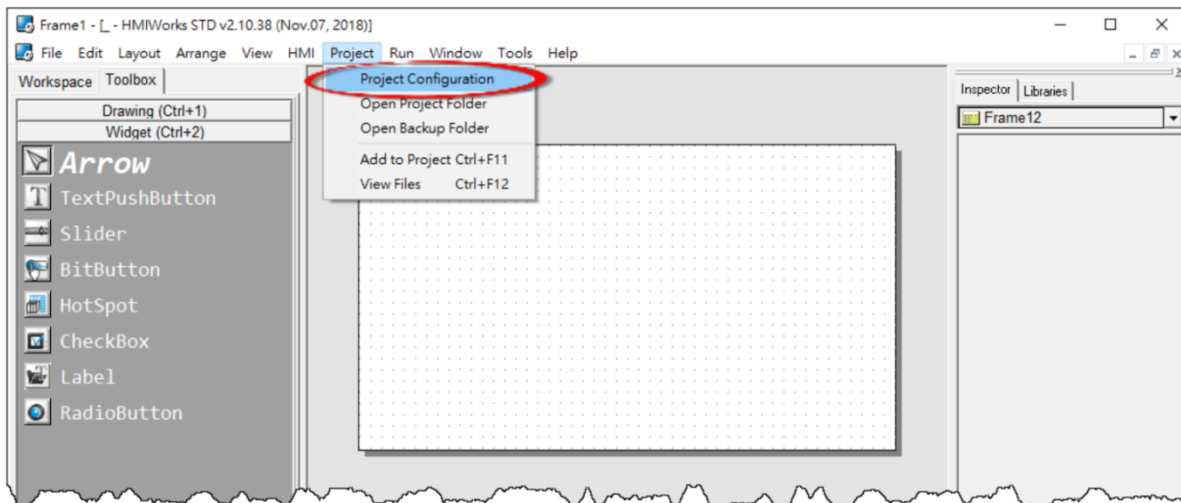

TextPuchButton 、 CheckBox 、 Slider 、 Label ◦

**Font style:**

Regular, bold, italic.

**Step 1:** Click the “**Project**”→“**Project Configuration**” item to open the “**Project Configuration**” dialog box.

**Step 2:** As shown below, we can select languages in the “Others” tab page of the “Project Configuration” dialog box. Select “Russian”.

Project Configurations

General **Others** Backup MiniOS

User Pictures

Folder Name [Pictures]

TPD-430 Only

Beep Frequency (Hz) 800

Beep Duration (ms) 100

Ladder

Use New Ladder Implementation  
for HMIWorks version 2.09.10 or above

User Flash Config

Size : Number of 0 (None) blocks

Note : Each block has size of 4KB

Below functions only for H/Mx and 7" Ethernet and RTC series :

NTP

Enable NTP DST

Time zone : 10 e.g. -8.5

Update Frequency : 15 Unit : sec

IP address or DNS Name :  
time.stdtime.gov.tw

Language Support

English

Russian

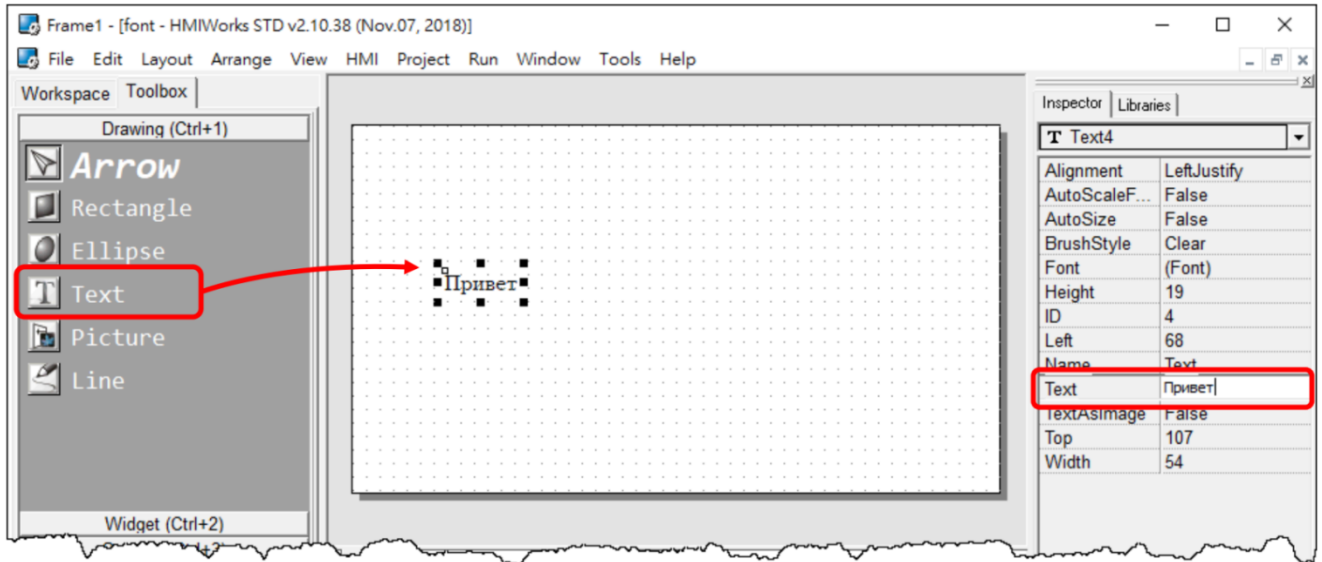

German, Italian, Spanish

French

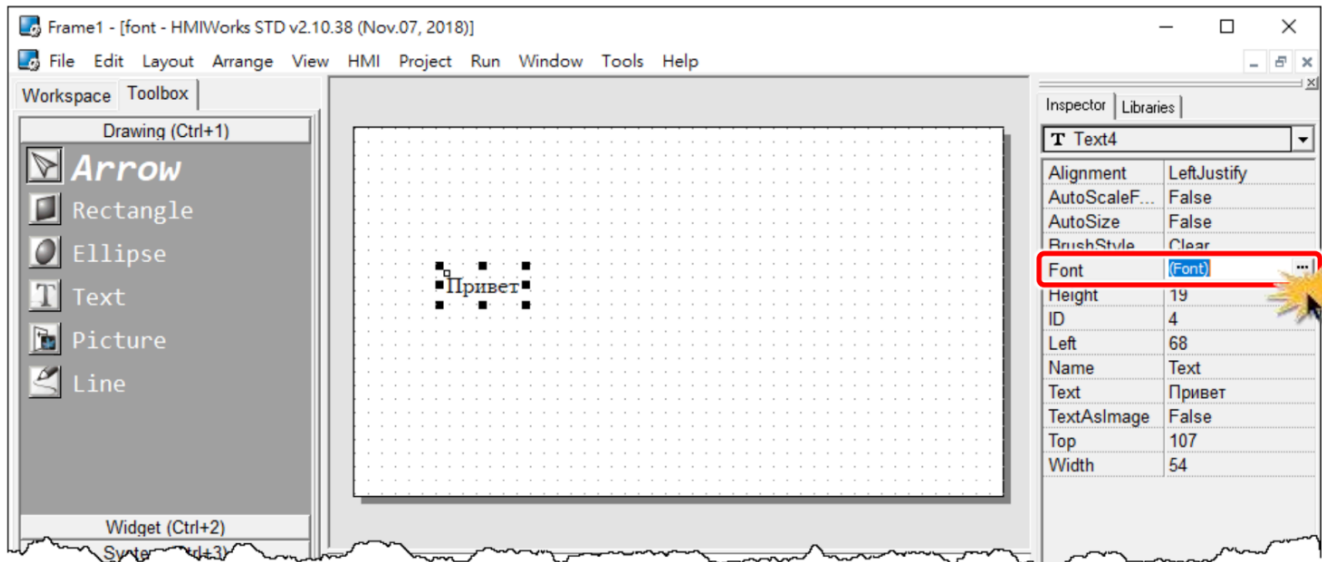

OK Cancel

**Step 3:** Click the "Text" object in the “Drawing” section of the "Toolbox" pane, and then click the desired position on the design frame to place the text.

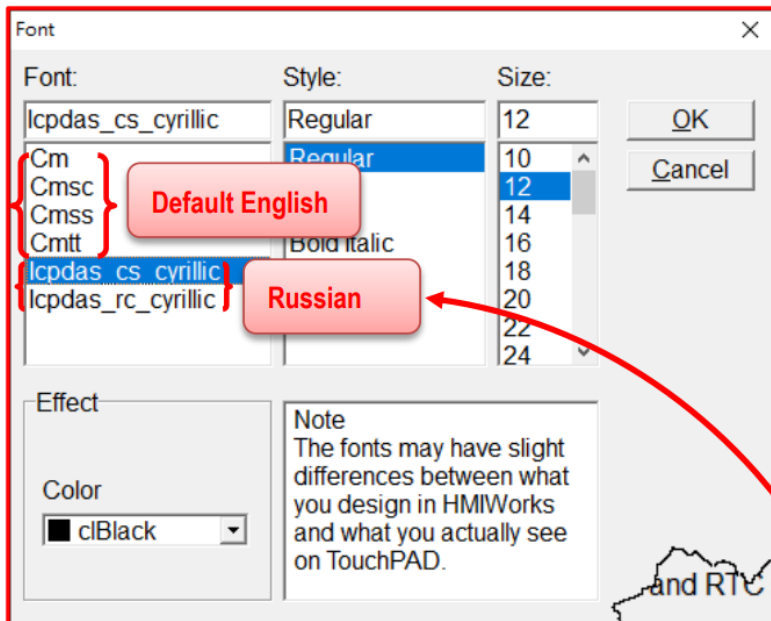

**Step 4:** In the “Inspector” pane, enter strings 「Привет」 in the “Text” field.

**Step 5:** In the “Inspector” pane, click the “...” button for the “Font” field to open the custom font dialog.

**Step 6:** Select Russian font (Icpdas\_cs\_cyrillic or Icpdas\_rc\_cyrillic)

Custom Font Dialog

The lcpdas\_cs\_cyrillic and lcpdas\_rc\_cyrillic font support characters (does not support red part)
