1. Linux Software Installation

The PISO-P32C32/P32A32 can be used in linux kernel 2.4.X and 2.6.X. For Linux O.S, the recommended installation and uninstall steps are given in Sec 1.1 ~ 1.2

1.1 Linux Driver Installing Procedure

- Step 1: Copy the linux driver “ixpio-0.20.4.tar.gz”(or the later driver version) in the directory “NAPDOS\Linux” of the companion CD to the linux host that you want to install driver.
 - Step 2: Decompress the tarball “ixpio-0.20.4.tar.gz”.
 - Step 3: Type `cd' to the directory containing the package's source code and type ./configure' to configure the package for your system.
 - Step 4: Type `make' to compile the package.
 - Step 5: Type `./ixpio.inst' to install the PIO/PISO driver module and build the device file “ixpioX” in the device directory “/dev” automatically.
-

1.2 Linux Driver Uninstalling Procedure

- Step 1: Type `cd' to the directory containing the package's source code.
- Step 2: Type `./ixpio.remove' to remove the PIO/PISO driver module.

2. Static Library Function Description

The static library is the collection of function calls of the PIO-DIO cards for linux kernel 2.4.x and 2.6.x system. The application structure is presented as following figure. The user application program developed by C(C++) language can call library “libpio.a” in user mode. And then static library will call the module ixpio to access the hardware system.

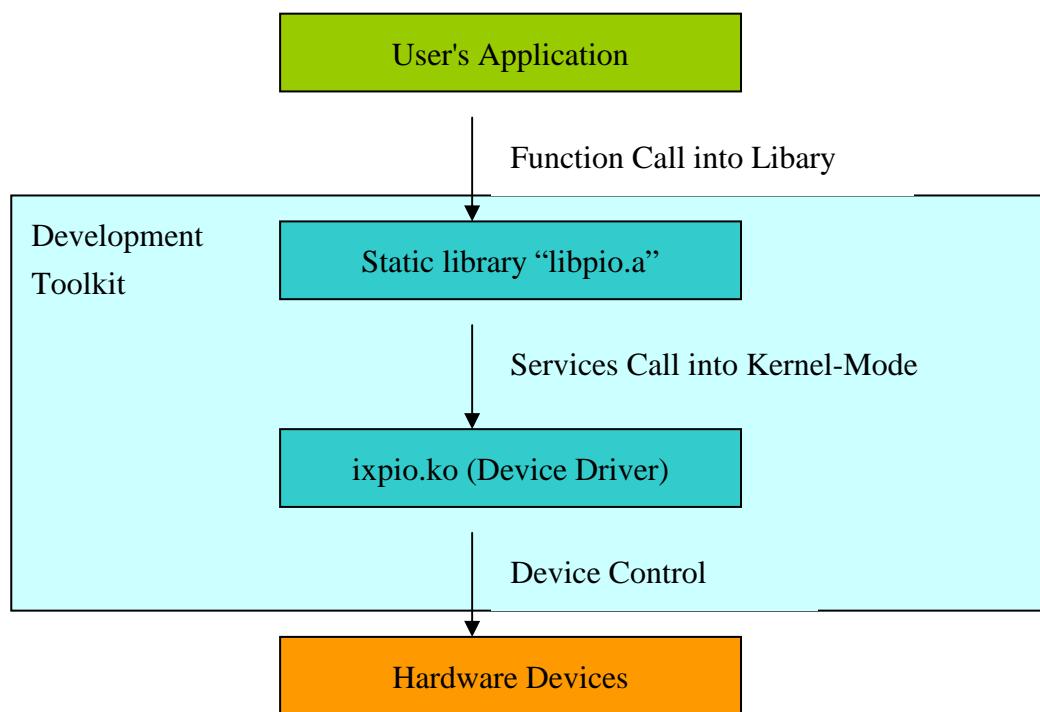

Figure 2.1

2.1 Table of ErrorCode and ErrorString

Table 2.1

Error Code	Error ID	Error String
0	PIODA_NOERROR	OK (No error !)
1	PIODA_MODULE_NAME_GET_ERROR	Module name can't get from file /proc/ixpio/ixpio
5	PIODA_DIGITAL_OUTPUT_ERROR	Digital output error
6	PIODA_DIGITAL_INPUT_ERROR	Digital input error

2.2 Function Descriptions

Table 2.2

Function Definition
WORD PIODA_GetDriverVersion(void);
WORD PIODA_GetLibraryVersion(void);
int PIODA_Open(char *dev_file);
WORD PIODA_Close(WORD fd);
WORD PIODA_DriverInit(WORD);
WORD PIODA_Digital_Output(WORD, WORD, byte);
WORD PIODA_Digital_Input(WORD, WORD, WORD *);

2.3 Digital I/O FUNCTIONS

2.3.1 PIODA_GetDriverVersion

- **Description:**

To show the version number of PIO/PISO linux driver.

- **Syntax:**

WORD PIODA_GetDriverVersion(Void)

- **Parameter:**

None

- **Return:**

The code "PIODA_NOERROR"(Please refer to "Section 2.1 Error Code")

2.3.2 PIODA_GetLibraryVersion

- **Description:**

To show the version number of PIO/PISO linux static libary..

- **Syntax:**

WORD PIODIO_GetLibraryVersion(void)

- **Parameter:**

None

- **Return:**

The code "PIODA_NOERROR"(Please refer to "Section 2.1 Error Code")

2.3.3 PIODA_Open

- **Description:**

To open device file.

- **Syntax:**

int PIODIO_Open(char *dev_file)

- **Parameter:**

dev_file : The path of device file

- **Return:**

The file descriptor of device file. If the file descriptor < 0, it means that open device file failure.

2.3.4 PIODA_Close

- **Description :**

To close device file.

- **Syntax :**

Word PIODIO_Close(WORD fd)

- **Parameter :**

fd : The file descriptor of device file that get from function PIODIO_Open

- **Return:**

The code "PIODA_NOERROR"(Please refer to "Section 2.1 Error Code").

2.3.5 PIODA_DriverInit

- **Description :**

To allocates the computer resource for the device. This function must be called once before applying other PIODA functions.

- **Syntax :**

WORD PIODA_DriverInit(WORD fd)

- **Parameter :**

fd : The file descriptor of device file that get from function PIODIO_Open

- **Return:**

The code “PIODA_MODULE_NAME_GET_ERROR” or
“PIODA_NOERROR”(Please refer to "Section 2.1 Error Code").

2.3.6 PIODA_Digital_Output

- **Description :**

This subroutine sends the 8 bits data to the specified I/O port.

- **Syntax :**

WORD PIODA_Digital_Output(WORD fd, WORD port, byte data);

- **Parameter :**

fd : The file descriptor of device file that get from function
PIODIO_Open.

port : The value of DO port . Please refer to “Table 2.3” DI/O port ID.

Table 2.3

PISO-P32C32 Port ID	PISO-P32A32 Port ID	DI/O Port
PISOP32C32_DIOA	PISOP32A32_DIOA	DI/O 0 ~ DI/O 7
PISOP32C32_DIOB	PISOP32A32_DIOB	DI/O 8 ~ DI/O 15
PISOP32C32_DIOC	PISOP32A32_DIOC	DI/O 16 ~ DI/O 23
PISOP32C32_DIOD	PISOP32A32_DIOD	DI/O 24 ~ DI/O 31
PISOP32C32_DIO_ALL	PISOP32A32_DIO_ALL	DI/O 0 ~ DI/O 31

data : 8 bits data.

- **Return:**

If returned value = PIODA_NOERROR, it means that sending data to
I/O port successfully. Otherwise, please refer to "Section 2.1 Error

Code".

2.3.7 PIODA_Digital_Input

- **Description :**

This subroutine reads the 8 bits data from the specified I/O port.

- **Syntax :**

```
WORD PIODA_Digital_Input(WORD fd, WORD port, WORD *di_data);
```

- **Parameter :**

fd : The file descriptor of device file that get from function
PIODIO_Open.

port : The value of DI port. Please refer to "Table 2.3" DI/O port ID.

di_data : A variable address used to storage the 8 bits input data.

- **Return:**

If returned value = PIODA_NOERROR, it means that reading data from DI port successfully. Otherwise, please refer to "Section 2.1 Error Code".

3. PISO-P32C32/P32A32 Demo Programs

All of demo programs will not work normally if PIO/PISO linux driver would not be installed correctly. During the installation process of PIO/PISO linux driver, the install-scripts “ixpio.inst” will setup the correct kernel driver. After driver(version 0.20.4 or the later driver version) compiled and installation, the related demo programs, development library and declaration header files for different development environments are presented as follows.

Table 3.1

Driver Name	Directory Path	File Name	Description
ixpio-0.20.4	Include	piodio.h	PIO/PISO library header
	Lib	libpio.a	PIO/PISO static libary
	Examples/pisop32c32		Digital input and output demo
	Examples/pisop32a32	port.c port_a.c	DI and DO demo with libary

3.1 Demo code “port.c”

This demo program is used to output digital from DO 0 ~ 31, input digital data from DI 0 ~ 31.

3.2 Demo code “port_a.c”

This demo program coded by using the static library “libpio.a”. It is used to output digital from DO 0 ~ 31 , input digital data from DI 0 ~ 31.
